

Wanscam User Manual for iPhone

1. Enable WI-FI mode of your iPhone .Go to iPhone **App Store**, search “**e-View**” iPhone monitor application and install it.

2. Add the camera to the App **e-View**.
 - 1). Run the **e-View**, you will find “**Add Camera**”
Please click here to add cameras.

2). The methods to add camera to e-View.

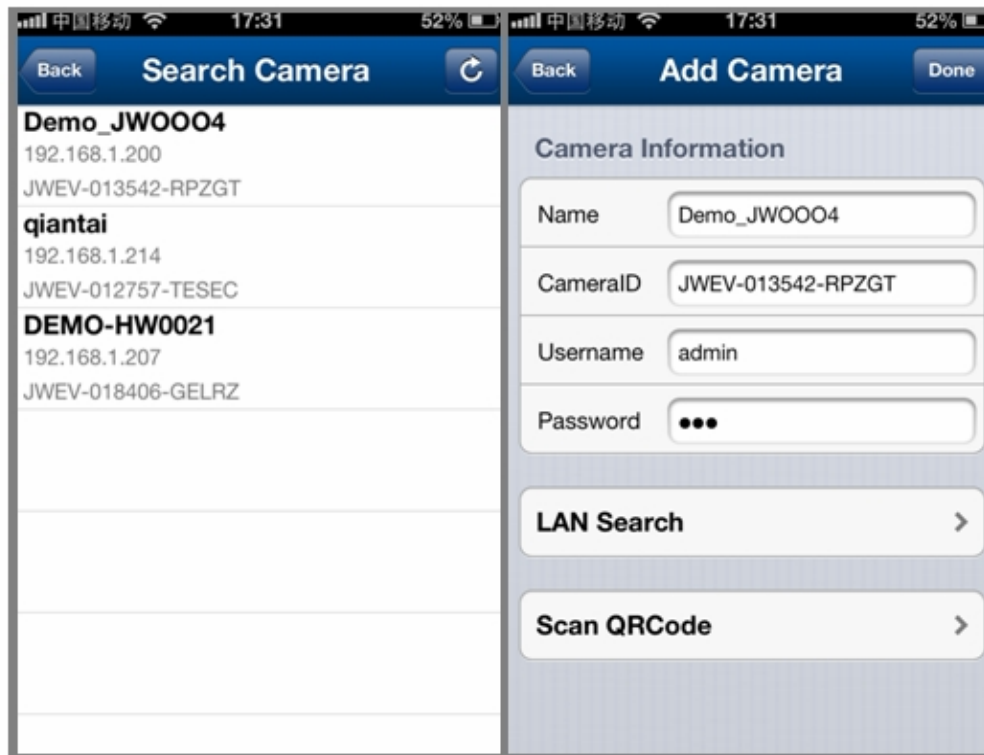

To find the camera's P2P ID number, [JWEV-XXXXXX-XXXXX](#)

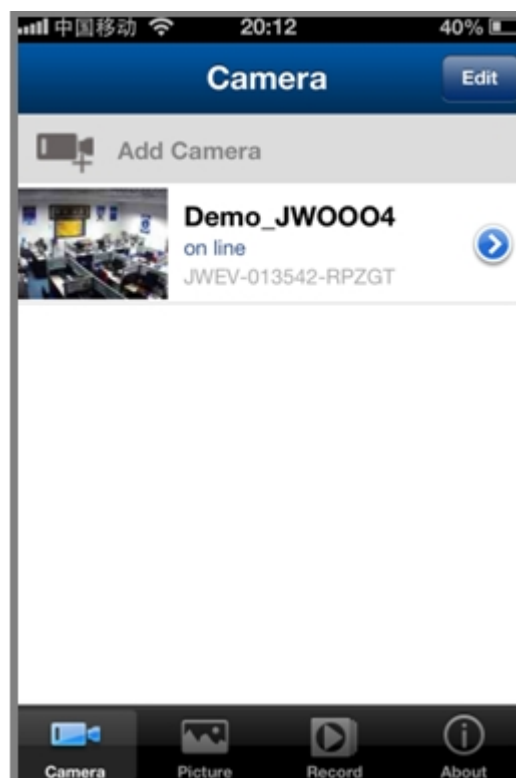

Method 1 : Input the *CameraID* *Username* *Password* of your camera manually.
Then click "**Done**" button.

Method 2 : Please click "**LAN Search**" button then you will get a list of the cameras in the same LAN with your iPhone. Choose the camera which you want to view.

Method 3 : Scan the QRCode: click the "**Scan ID**" button, at the bottom of the camera, there is a label with QRCode, then use your iPhone to scan the bar code, it will show the ID, then press "**Done**".

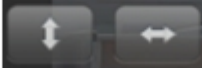

3. Finished adding the camera, you will see following picture:

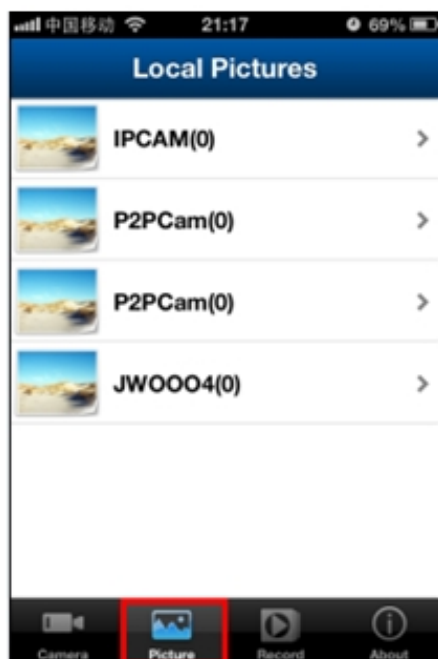

4. Live video and operation interface.

-  : Snapshot.
  : Record.
  : Audio&Talkback.
-  : Contrast.
  : Brightness.
  : Default all.
-  : Resolution.
  : Pan&tilt automatically.

Pay attention: Audio and talkback function cant be enabled at the same time. By sliding the screen, you can control your camera.

5. Snapshots & Recording, the files can be found here.
